

# CONTROL FOOT ISSUES AND BOOST PRODUCTIVITY

## StockMins-Hoof n Horn

- ✓ Support ewes for better lambing results
- ✓ Improve hoof growth & structure
- ✓ Fight infection & boost immunity
- ✓ Weatherproof, safe and easy to use

## CONTROL HOOF ISSUES NOW AND BOOST EWE PERFORMANCE THIS LAMBING SEASON

### BOGGY CONDITIONS CAN CAUSE LAMENESS

A combination of hoof wear, a wet summer and autumn, and the depletion of minerals, trace elements and vitamins associated with pregnancy can lead to hoof infection and lameness.

### LAMENESS CAN IMPACT PREGNANCY

Hoof infection and lameness of pregnant ewes can have serious impacts on their mobility, causing an increased level of stress and negatively impacting grazing and energy intake. This can lead to pregnancy toxemia, low lamb birth weights and an increased risk of bacterial infection in immature lambs.

### MANAGE LAMENESS BEFORE LATE PREGNANCY

There are short-term and long-term benefits to controlling lameness early. These include, minimising stress during lambing; reducing the risk of developing pregnancy toxemia through lack of selective feeding and proactively preventing the development of lameness in ewes during late pregnancy.

### SUPPLEMENT TO HELP STRENGTHEN HOOVES

Mineral supplementation combined with hoof pairing and foot bathing have been shown to deliver the best results, especially when performed during the drier months.

### WHY STOCKMINS-HOOF N HORN?

**StockMins-Hoof n Horn** is a high specification weatherproof granular, loose-lick supplement specifically designed to be fed to livestock to repair damage, fortify hooves and chitinous tissue, and boost immunity during times of high production and stress.

**StockMins-Hoof n Horn** offers the combined power of three active ingredients targeted at generating healthy hoof growth, tissue repair and structural integrity. **StockMins-Hoof n Horn** is supported by essential minerals, trace elements and elevated levels of vitamin E, making it an ideal supplement to support highly productive ewes during the lambing season.

## Product Summary

### StockMins–Hoof n Horn

~ Hoof Health Supplement ~

**Product Code:** MHH17

#### **Purpose:**

A complete high specification supplement designed to be fed to livestock to fortify hooves and chitinous tissues at times when animals are predisposed to foot abscess and other *Fusobacterium*, *Necrophorum* and *Actinomyces* infections. It also offers general fortification of minerals, trace elements and vitamins.

#### **Product Appearance:**

**StockMins-Hoof n Horn** appears as a granular, palatable, dry and dust free powder. It is molasses coated and weatherproof. It also has a strong earthy smell.

#### **Target Animals:**

Feed free-access to sheep and cattle from ten weeks to a month prior to time of exposure to wet pastures and feed continuously during high risk periods. During lambing continue feeding to ewes and lambs for at least four weeks post lambing. It may also be included in a mixed ration.

#### **Product Features:**

- Is fortified with effective acid buffers to reduce the chance of acidosis (SARA).
- Contains the B vitamin, Biotin which has been shown to increase hoof growth and strength.
- Offers livestock high levels of inorganic and organic zinc, with the specific organic zinc included having strong indications for hoof quality and immune response.
- Includes an elevated level of iodine as indicated for foot abscess in sheep.
- Contains Vitamin E for ewe health, immune-response and lamb survival and viability.
- Contains high levels of available magnesium (5.5%) from four separate sources to optimise absorption and to meet the animal's higher requirements during stressful periods.
- Acidic salts are included to moderate blood pH and aid in mineral mobilisation.
- Molassed and granular to improve palatability, control dust, reduce product losses and limit segregation.
- Weatherproof to reduce water damage and leaching and for general ease of use.

*\*Can be supplied with the addition of Bovatec® for increased growth, feed efficiency, higher milk production and to assist in the control of coccidiosis in lambs.*

**Cost:** **StockMins-Hoof n Horn** costs 8 cents/head/day at the recommended intake levels for sheep and 33 cents/hd/day at the recommended intake for cattle.

#### **Feeding Instructions:**

**Free Access Feeding:** - Offer free access in tubs limiting intake for sheep to around 25g/head/day and cattle to 100g/hd/day once animals are fully adapted. Animals will control their own intake. Use one tub for 50-60 sheep; replenishing supplement as necessary.

**Mixed Rations:** - Mix thoroughly together with ingredients to make a complete mixed ration at a rate of 25kg of **StockMins-Hoof n Horn** per 1 tonne of feed.

**Caution:** - **Only feed to intended livestock**  
- **Do not allow access to horses**
